ABSTRACT

This report provides summary data on the number of fee-for-service Medi-Cal funded abortions performed during 2000, the type of facility where a procedure was performed, and Medi-Cal expenditures for these procedures. Only abortion claims received and processed for date-of-service January through December 2000 are included in this report. The term fee-for-service (FFS) used throughout this report refers to these claims. The data are presented at both county and state levels. ***Estimates*** of abortions for enrollees in Health Care Plans (HCP) are included since encounter data are not yet available. A distribution by county is provided.

This report, as well as previous years' abortion reports, are available at our web site, www.dhs.ca.gov/MCSS.

Questions regarding data provided in this report and any other inquiries related to Medi-Cal funded abortions in California may be directed to Jan Rains at (916) 657-0920 or JRains@dhs.ca.gov.

HIGHLIGHTS

- Medi-Cal funded a total of 45,794 fee-for-service (FFS) ¹ abortions ² in 2000 and paid an average of \$322 per procedure, totaling \$14,754,481 for all abortions.

There were an estimated 29,415 abortions for enrollees in HCPs, excluding San Mateo and Santa Barbara.
- The average monthly rate of abortions per 1,000 FFS eligible women aged 15-45 years was 6.1.
- Just over one-third, 34 percent, of Medi-Cal funded abortions were performed for women 20-24 years old.
- Abortion services to Hispanic females accounted for 34 percent of total FFS abortions, exceeding the percentage of white females for the eighth consecutive year.
- Undocumented alien eligible women accounted for fifteen percent of FFS abortions, up from thirteen percent in the previous year.
- Over half of the abortions, 56 percent, were done at a physician's office, averaging 30 abortions per office location.
- The cost of an abortion performed on a hospital inpatient basis averaged \$2,421 per abortion. Abortions done at a physician's office averaged \$283 per abortion. This is lower than the cost of abortions done in clinics and hospital outpatient settings.
- The number of Medi-Cal eligible women who received abortion services was 44,298. Ninety-seven percent of these women had only one abortion, the same percentage as in 1999.

1 The term fee-for-service in this report refers to all abortion claims received and processed by the Medi-Cal fiscal intermediary for date-of-service January through December 2000, regardless of the enrollment plan.

2 The term abortion as used in this report refers to induced abortions only.

INTRODUCTION

The number of induced abortions funded by Medi-Cal during 2000, on a **fee-for-service (FFS)** basis, 45,794, is 0.5 percent lower than in 1999, which had dropped 16 percent from the 1998 level. Medi-Cal payments for these abortions were 1 percent higher than in 1999.

An estimated 29,415 abortions were provided to enrollees in health care plans (HCP), bringing the total estimated Medi-Cal funded induced abortions in 2000 to 75,209.

While the number of FFS Medi-Cal funded abortions decreased only one-half of one percent, the average monthly rate of abortions per 1,000 FFS eligible women 15-45 years old dropped from 6.4 in 1999 to 6.1 in 2000. This average monthly rate has dropped substantially during the decade of the 1990's, from a high of 10.01 in 1989.

Unfortunately, the total number of abortions for California women is unknown. This report, which encompasses services to Medi-Cal beneficiaries only, is based on a paid claims database and estimates from Medi-Cal managed care enrollment data.

Data Qualifications

This report discusses induced abortions that occurred during calendar year 2000 and appear on the Medi-Cal paid claims file between January 2000 and September 2001. The 21-month file was used to allow for delays in submitting or processing claims.

Abortions performed for enrollees in health care plans (HCP), otherwise known as managed care, are included in this report only as estimates. Encounter claims for these HCPs, excluding San Mateo and Santa Barbara, are reported on a sporadic basis with an unknown level of completeness. Due to the limited reporting, it is not known exactly how many abortions these plans provided during 2000.

Beginning with the 1999 report, a revised methodology for estimating abortions provided by HCPs was developed due to information on trends in abortion rates by aid category over the past decade.

Counties participating in managed care require that beneficiaries in selected aid categories be placed into HCPs. These are referred to as "mandatory" aid codes. The estimates were derived by calculating the change in abortion rates for beneficiaries in mandatory aid codes in fee-for-service counties and applying the rate of change to eligibility data for persons enrolled in HCPs to project expected numbers of abortions within this population. Table A displays these estimates by county.

To estimate the calendar year total, add the estimated 29,415 abortions to the reported 45,794 abortions. This yields an estimated total of 75,209 abortions for Medi-Cal beneficiaries in 2000.

Estimates were derived by applying the average change from a base of 1991-1993 to 2000 in the abortion rates in "mandatory aid codes" for fee-for-service counties with 100 or more abortions to the eligibility data in managed care counties.

The abortion rates used in developing the estimates of abortions provided to women in HCPs are as follows:

Medi-Cal FFS Eligibles, Induced Abortions and Expenditures

While total Medi-Cal FFS expenditures increased 71 percent since 1990, payments for Medi-Cal funded induced abortions for the same period were reduced by 60 percent.

The average monthly number of FFS eligible women ages 15-45 climbed four percent from 1999 to 2000, while the number of abortions for the same group remained nearly the same with only a 0.5 percent drop.

The average monthly rate of abortions per 1,000 FFS eligible women continues to decline, from 10.1 in 1989 to 6.1 in 2000.

As mentioned in Data Qualifications, the availability of data from HCP is extremely limited, which contributes to the drop in the number of reported abortion services; however, data from counties that are solely fee-for-service support the assumption there has also been a true decrease in the abortion rate.

See Table 1 on next page.

Distribution of Medi-Cal Funded Induced Abortions by Age and Ethnicity

Women ages 20-24 accounted for the highest percent of abortions among all ethnic groups, 34 percent.

For the eighth year in a row, Hispanic women have accounted for the highest percentage of FFS abortions, fluctuating between 30 and 34 percent of the total. This apparent shift is most likely not an actual shift in the ethnicity of women seeking abortion services, but a reflection of the large number of Hispanic women eligible for emergency services as undocumented aliens. Women in these aid categories would be provided services via the FFS system rather than through HCPs.

Prior to 1993, white women represented the highest percentage, followed by black women.

Since 1990, the percentage of abortions for women of Asian and Pacific Islander origin to total abortions has fluctuated between four and five percent. Over the same decade, the percentage of abortions for black women has dropped from 26.5 percent in 1990 to 13 percent in 2000.

Distribution of Medi-Cal Funded Induced Abortions by Age and Aid Category

Eligible women in the aid category AFDC (Families) accounted for the highest percentage of Medi-Cal funded induced abortions, 46 percent; however, this aid category is the major component of managed care expansion, resulting in a declining representation in the FFS arena. Although the AFDC group still accounts for the greatest percentage of FFS abortions, the percent has dropped from 79 percent in 1994 to 46 percent six years later in 2000.

The second largest group is the undocumented alien women, 15 percent of FFS abortions, up from ten percent in 1998. It is important to keep in mind that the majority of health care plans do not cover services for undocumented aliens, so this aid group is concentrated in the FFS delivery system.

The minor consent aid category follows closely with 14 percent of total FFS abortions.

² Pregnant women eligible under the 200% poverty program and children eligible under the 100% poverty program.

Note: See Table 9 for aid category distribution by county.

Source: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 2000.

Distribution of Medi-Cal Funded Induced Abortions by Type of Facility

During 2000, 56 percent of Medi-Cal funded abortions were performed at physicians' offices, followed by clinics, 32 percent. In comparison, 49 percent of Medi-Cal payments for abortion services were to physicians. Abortions performed at physicians' offices were the least costly. At an average cost of \$283 per abortion, it was \$8 less than the cost at a clinic and \$196 less than the cost at a hospital outpatient department.

The overall FFS average cost per abortion declined from \$368 in 1990 to \$322 in 2000, a 14 percent drop.

Even though only six-tenths of one percent of all abortions were performed at hospital inpatient departments, Medi-Cal payments for these abortions accounted for five percent of total Medi-Cal FFS abortion expenditures, averaging \$2,421 per abortion. The average cost per abortion, excluding those done in hospital inpatient departments, was \$309.

Note: See Tables 10, 11 and 12 for type of facility distribution by county.

Source: Department of Health Services, HR70 Summary, Maternal Care File, 2000.

The number of facilities providing abortion services dropped two percent from 1999 to 2000. The greatest change was in the number of inpatient hospitals providing abortions, which decreased 17 percent, from 103 facilities in 1999 to 86 in 2000. This lower number of facilities provided four percent fewer abortions than in the previous year, with the average per facility remaining at three.

The average number of abortions performed in physicians' offices was 30, the same as in 1999.

The number of clinics providing abortion services rose seven percent, from 161 to 172. The number of abortions done at these facilities increased four percent from 13,828 in 1999 to 14,428 in 2000. The result is a two percent decrease in the average number of abortions performed per clinic.

Frequency of Medi-Cal Funded Induced Abortions

During 2000, a total of 44,298 FFS eligible women had at least one abortion, which is less than one full percent drop from 1999. Ninety-seven percent of these women, 42,850, had only one abortion, the same percentage as in 1999.

County Distributions of Medi-Cal Funded Induced Abortions

The following four tables display the distribution of abortion services by county. Individual county data do not necessarily reflect the same number and expenditure distributions that exist statewide.

Data provided in Tables 7, 8, 9, 10 and 13 are distributed by county of eligibility; i.e., the county that appears on the Medi-Cal card of the beneficiary. It should be noted that this is not necessarily the county of residence at the time of service, since a beneficiary could have moved from one county to another, and her eligibility might have been transferred at the time the service was rendered. Data in these tables may also include services performed outside California for a Medi-Cal beneficiary.

Data provided in Tables 11 and 12 are distributed by county of provider; i.e., county of occurrence.
